- Bulgaria: Burgas,
- Switzerland: Zurich,
- Denmark: Copenhagen,
- Croatia: Dubrovnik, Zadar,
- Montenegro: Podgorica,
- Turkey: Antalya, Izmir

TECHNICAL INFRASTRUCTURE

In the context of attracting investments to the city, including direct foreign investments, the technical infrastructure (equipping with gas, electricity, water and sewage networks) and communication infrastructure plays an extremely important role. These are the basic elements taken into account by the investor when making a decision to locate an investment.

- Electricity: The city is well-equipped with a medium and low voltage network of the required standard.
- Gas network: The Lower Silesia Voivodship is supplied with natural gas from the national high-pressure gas pipeline system and a system of smaller local branches to the reduction and measurement stations.
- Heating network: The largest fuel combustion installations in the city of DzierÅ¼oniÃ³w belong to the company ZEC ZakÅ?ad Energetyki Cieplnej Ltd. All district heating networks are operated by the enterprise.
- The city has a separate sewage network. The sanitary sewage network is owned by the company WodociÄ gi i Kanalizacja in DzierÅ¼oniÃ³w, and the rain sewage network is owned by the city. Access to the sewage system has approximately 99.9%. city â??â??residents.
- New fiber-optic networks, underground and overhead cable telephone lines dominate. Wireless network technology is also dynamically developing.
