Digitally Safe Company - check the level of

The Digital Safe Company program is a certification program in the area of â??â??cyber security addressed to small and medium-sized enterprises.

Program goals:

- Development of digital competences among Polish entrepreneurs, with particular emphasis on cybersecurity.
- Increasing the level of SME security and the stability of economic turnover in Poland.
- Dissemination and implementation of a new cybersecurity standard in companies.

Program steps:

- Diagnosis - verification of the state of cybersecurity and digital skills of the company through a survey.
- Education on digital security and digital services - an assessment of the strengths and weaknesses of the company and a description of the tasks to be performed in the form of a personalized guide.
- Improvement - based on the tasks described in the guide, the entrepreneur makes changes and introduces security in his company.

What will you gain thanks to the program?

- You will better protect your enterprise against cyber threats and attacks from the Internet.
- You will verify whether the company applies the basic principles of cyber security.
- You will enter secure passwords and necessary hardware and software records.
- You will learn more about using cloud services safely.
- You will take care of company electronic services - you will increase protection against spam and fraud attempts.
- You will learn how to properly use electronic identification means, e.g. a trusted profile and the mObywatel application.
- You will learn more about public administration e-services.
- You will obtain the Certificate of a Digitally Safe Company.
